

POV by WOC

Inspiration.

Representation.

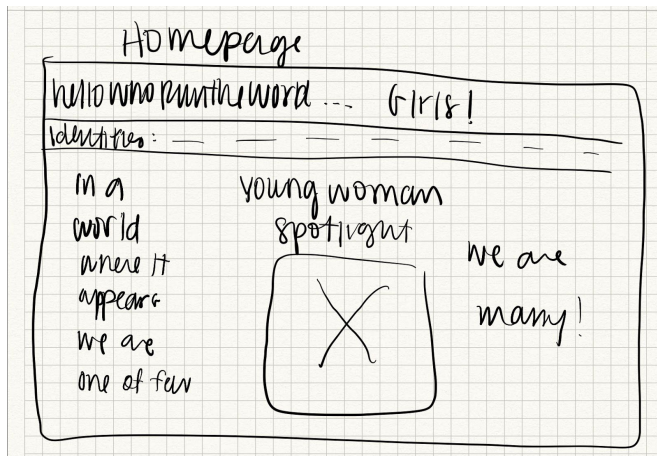

Affirmation.

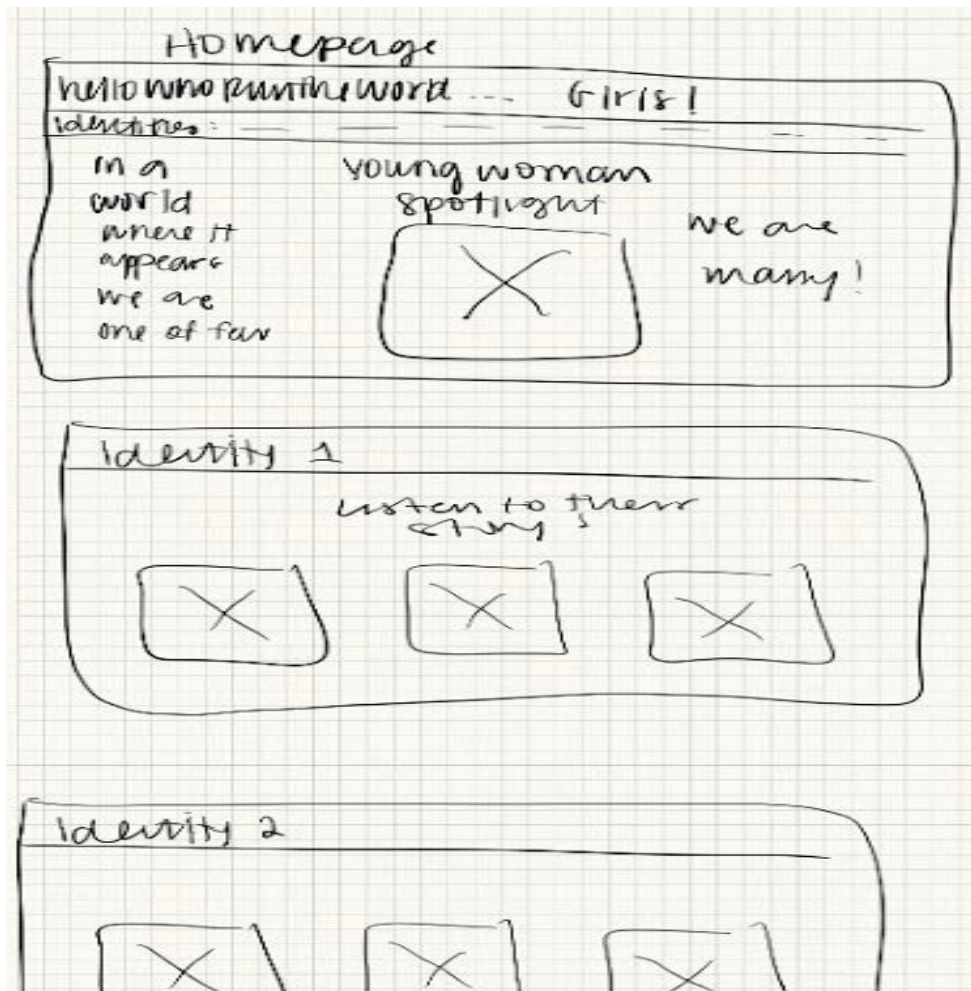

These are three of many things that add to a healthy relationship with one's self and the people in society. Inspiration opens your mind to ideas that needed a little nudge, representation lets you know that you're heard, seen, and acknowledged while affirmation gives you a pat on the back for a job well done or a lack thereof.

As young minority women in society, our group, HelloWhoRunsTheWorld was formed to create a platform where other minorities could get in touch with their heritage, develop technical and interpersonal skills, all while drawing motivation from people they see themselves in. This project is a website dedicated to sharing the stories of minorities, creating a safe space for people to ask and answer questions pertaining to their daily lives, and teaching skills as it has different sections for educational as well technical tutorials and videos.

Initial Design

During the brainstorming phase, the general idea was to have a main page celebrating and welcoming minorities, and then a collection of webpages with a similar idea of showcasing the traditions, stories, and excellence of each group. The pictures below are rough sketches of the central idea with a home page and secondary pages with different but ultimately similar content.

Features

The process of creating this website continued by identifying the features that would be incorporated into it. This includes the main web page that has mini-stories and short clips of women of colour, a Q&A section at the end of the page which has questions from viewers and readers which are answered by someone who was confidently chosen to address them. On this first page, there is also a sign-up section where people could input their contact details to get updates, newsletters, and general motivation from the group, there is a social media section where readers can get information to follow the group on other social media platforms, and there is a section which displays upcoming events and series so readers could RSVP for them and stay in touch with activities. In order to view other web pages that are dedicated to individual

identities, there is a section on the home page that redirects the user to the selected identity.

Technology Used

For this web application, some of the technology used include Repl.it, which was our resource for collaboratively developing the code for the project. Other resources include HTML, CSS, and JS which were the primary languages used. Bootstrap was also used for responsiveness and front-end design.

Q&A You Ask...We Answer :)

Q: Hi! I live in the South and I don't see a lot of people that look like me. I never feel myself relating to other people and I feel like I have no one to connect with. How do y'all deal with being the only "one"?

A: Great Question...At vero eos et accusamus et iusto odio dignissimos ducimus qui blanditiis praesentium voluptatum deleniti atque corrupti quos dolores et quas molestias excepturi sint occaecati cupiditate non provident, similique sunt in culpa qui officia deserunt mollitia animi, id est laborum et dolorum fuga.

Future Steps

Moving further, ways to upgrade and update this project would be to use Firebase through Google for app development and data management. This would allow us to create a sign-in system, RSVP system, and discussion forum with security. We could also use Firebase hosting to host the project on the web.

Roles

1. Anais- Set up HTML pages and helped with auxiliary pages CSS but primarily worked on home page set to provide an easy user experience by utilizing bootstrap for better responsiveness, HTML, and CSS.
2. Raiza- Worked on auxiliary pages of the website, helped with HTML and CSS design.
3. Laurel- Worked with HTML and CSS, incorporated some media and text into the home page. Additionally worked on the documentation for the project.
